INFORMATION SECURITY

Information security is our passion. Our team of experts is dedicated to managing and executing an Information Security Program that underpins an Information Security Management System (ISMS). This includes integrating governance, defining roles and responsibilities, implementing technological solutions, and conducting continuous monitoring within Information Security. Additionally, our Information Security outsourced roles are equipped to facilitate the following activities:

Creating roles and responsibilities for Information Security management within the organisation.

Producing governance documentation (e.g. policies, procedures, and standards) or reviewing and updating those developed by your organisation.

Providing guidance to identify and mitigate the potential Information Security risks in a changing business environment.

Reporting to various management levels across the organisation.

Conducting Information Security Awareness Programmes and training schedule.

Information Security Management System maintenance and assisting in continuous improvement.

INFORMATION SECURITY
IS
OUR PASSION

Our mission

To enhance global safety by delivering Information protection and Security services that are custom-designed to meet the unique requirements of each client.

Our Vision

To become a partner of choice for Information Security and Compliance services.

Our team

Our teams blend in-depth sector knowledge with the necessary technical expertise and certification to fulfill our clients' requirements.

We are backed by the positive results we have achieved with our clients.

CYBER SECURITY

The Deployed Cyber Security Manager (DCSM) will enhance your organisation's cyber resilience by bolstering your ability to identify, protect, detect, respond to, and recover from cyber threats and attacks. We will introduce a proactive mindset to your team. Our Cyber Security team is equipped to assist your organisation in initiating and managing the following:

Promote and maintain a threat profile
Understanding the current cyber threats most relevant to your organisation can help prioritise budgeting and protection efforts channeled where they are needed most.

Establish and administer road maps
Supporting your organisation's strategy is crucial for enhancing resilience against threats and improving overall Cyber Security maturity.

Supervise the performance of Cyber Security related processes and technology improvement plans.

Cyber Security control appraisal
Covering governance, personnel, processes, and technologies to provide a comprehensive view of your Cyber Security maturity, based on best practices .

Boost threat management potentials
Assisting your organisation in adopting a threat-based approach to Cyber Security, utilizing threat Intelligence, and employing threat monitoring and threat hunting. Expert processes, technologies, and skills can significantly enhance your security posture.

Establish and embrace an incident response process
On an organisation-wide basis, this includes conducting periodic simulations that involve all stakeholders and interested parties.
